Question No. 1

A company has an on-premises data center that is running out of storage capacity. The company wants to migrate its storage infrastructure to AWS while minimizing bandwidth costs. The solution must allow for immediate retrieval of data at no additional cost.

How can these requirements be met?

- **A.** Deploy Amazon S3 Glacier Vault and enable expedited Enable provisioned retrieved capacity for the workload.
- **B.** Deploy AWS Storage Gateway using cached volumes. Use Storage GATEWAY store data in Amazon retaining copies of frequently accessed data subnets locally.
- **C.** Deploy AWS Storage gateway using stored volume to store data locally Use Storage gateway asynchronously back up point-in-time snapshots of the data Amazon S3.
- **D.** Deploy AWS Direct Connects to connect with on-premises data center. Configure AWS Storage gateway to store data locally use storage gateway to asynchronously back up point-in-time snapshot of data Amazon S3.

Answer: C

Question No. 2

A company needs to store 160TB of data for an indefinite of time. The company must be able to use standard SQL and business intelligence tools to query all of the dat

a. The data will be queried no more than twice each month.

What is the MOST cost-effective solution that meets these requirements?

- **A.** Store the data in Amazon Aurora Serverles with MySQL . Use an SQL client to query the data.
- **B.** Store the data in Amazon S3. Use AWS Glue. Amazon Athena. IDBC and COBC drivers to query the data.
- **C.** Store the data in an Amazon EMR cluster with EMR File System (EMRFS) as the storage layer use Apache Presto to query the data.
- **D.** Store a subnet of the data in Amazon Redshift, and store the remaining data in Amazon S3. Use Amazon Redshift Spectrum to query the S3 data.

Answer: D

Question No. 3

A company has a mobile chat application with a data store based in Amazon DynamoDB. Users would like new messages to be need with as little latency as possible. A possible architect needs design an optimal solution that requires minimal application changes.

Which method should the solution architect select?

- **A.** Configure amazon DynamoDB Accelerator (DAX) for the new messages table. Update the code to use DAX endpoint.
- **B.** AddDynamoDB read replicas to handle the increased read lead the application to point to the read endpoint for the read replicas.
- **C.** Double the number of read capacity units for the new messages table in DynamoDB.

Continue to use the existing DynamoDB endpoint.
- **D.** Add an Amazon ElastiCache for Redis cache to the application stack. Update the application to point to the Redis cache endpoint of DynamoDB.

Answer: A

Question No. 4

An ecommerce company is running a multi-tier application on AWS. The front-end and backend tiers run on Amazon EC2, and the database runs on Amazon RDS for MYSQL. The backend tier communities with the RDS instance. There are frequent calls to return identical database from the database that are causing performance slowdowns.

Which action should be taken to improve the performance of the backend?

- **A.** Implement Amazon SNS to store the database calls.
- **B.** Implement Amazon ElasticCache to cache the large database.
- **C.** Implement an RDS for MySQL read replica to cache database calls.
- **D.** Implement Amazon Kinesis Data Firehose to stream the calls to the database.

Answer: B

Question No. 5

A solution architect is designing a new service behind API Gateway. The request pattern for the service will be unpredictable and can change suddenly from 0 request to over 500 per second. The total size of the data that needs to be persisted database is currently less than 1 GB unpredictable future growth. Date can be queried using sampling key --value request.

Which combination of AWS services would meet these requirements? (Select TWO.)

- **A.** AWS Fargete
- **B.** AWS Lambda
- **C.** Amazon DynamoDB
- **D.** Amazon EC2 Auto Scaling
- **E.** MySQL-compatible Amazon Aurora

Answer: B, C
