Question No. 1

Refer to the exhibit. A network administrator configured mutual redistribution on R1 and R2 routers, which caused instability in the network. Which action resolves the issue?

- **A.** Set a tag in the route map when redistributing EIGRP into OSPF on R1. and match the same tag on R2 to deny when redistributing OSPF into EIGRP.
- **B.** Set a tag in the route map when redistributing EIGRP into OSPF on R1. and match the same tag on R2 to allow when redistributing OSPF into EIGRP.
- **C.** Advertise summary routes of EIGRP to OSPF and deny specific EIGRP routes when redistributing into OSPF.
- **D.** Apply a prefix list of EIGRP network routes in OSPF domain on R1 to propagate back into the EIGRP routing domain.

Answer: A

Question No. 2

Refer to the exhibit. R1 and R2 cannot establish an EIGRP adjacency. Which action establishes EIGRP adjacency?

- **A.** Remove the current autonomous system number on one of the routers and change to a different value.
- **B.** Remove the passive-interface command from the R2 configuration so that it matches the R1 configuration.
- **C.** Add the no auto-summary command to the R2 configuration so that it matches the R1 configuration.
- **D.** Add the passive-interface command to the R1 configuration so that it matches the R2 configuration.

Answer: B

Question No. 3

When configuring Control Plane Policing on a router to protect it from malicious traffic, an engineer observes that the configured routing protocols start flapping on

that device. Which action in the Control Plane Policy prevents this problem in a production environment while achieving the security objective?

- **A.** Set the conform-action and exceed-action to transmit initially to test the ACLs and transmit rates and apply the Control Plane Policy in the output direction
- **B.** Set the conform-action and exceed-action to transmit initially to test the ACLs and transmit rates and apply the Control Plane Policy in the input direction
- **C.** Set the conform-action to transmit and exceed-action to drop to test the ACLs and transmit rates and apply the Control Plane Policy in the input direction
- **D.** Set the conform-action to transmit and exceed-action to drop to test the ACLs and transmit rates and apply the Control Plane Policy in the output direction

Answer: B

Question No. 4

Refer to Exhibit.

```

Ipv6 unicast-routing
!
Router ospfv3 4
  Router-id 192.168.1.1
!
Interface E 0/0
  Ipv6 enable
  Ip address 10.1.1.1 255.255.255.0
  Ospf3 4 area 0 ipv4
  No shut
!
Interface Loopback0
  Ipv6 enable
  Ipv4 172.16.1.1 255.255.255.0
  Ospf3 4 area 0 ipv4

```

The network administrator configured the branch router for IPv6 on the E0/0 interface. The neighboring router is fully configured to meet requirements, but the neighbor relationship is not coming up. Which action fixes the problem on the branch router to bring the IPv6 neighbors up?

- **A.** Enable the IPv4 address family under the router ospfv3 4 process by using the address-family ipv4 unicast command
 - **B.** Disable IPv6 on the E0/0 interface using the no ipv6 enable command
 - **C.** Enable the IPv4 address family under the E0/0 interface by using the address-family ipv4 unicast command
 - **D.** Disable OSPF for IPv4 using the no ospfv3 4 area 0 ipv4 command under the E0/0 interface
- Explanation Once again, Cisco changed the IOS configuration commands required for OSPFv3 configuration. The new OSPFv3 configuration uses the "ospfv3" keyword instead of the earlier "ipv6 router ospf" routing process command and "ipv6 ospf" interface commands. The Open Shortest Path First version 3 (OSPFv3) address families feature enables both IPv4 and IPv6 unicast traffic to be supported. With this feature, users may have two processes per interface, but only one process per address family (AF).

Answer: A

Question No. 5

An engineer is troubleshooting on the console session of a router and turns on multiple debug commands. The console screen is filled with scrolling debug messages that none of the commands can be verified if entered correctly or display any output. Which action allows the engineer to see entered console commands while still continuing the analysis of the debug messages?

- **A.** Configure the logging synchronous command
- **B.** Configure the no logging console debugging command globally
- **C.** Configure the logging synchronous level all command
- **D.** Configure the term no mon command globally

Answer: A
