Question No. 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Storage account that contains two 1-GB data files named File1 and File2. The data files are set to use the archive access tier.

You need to ensure that File1 is accessible immediately when a retrieval request is initiated.

Solution: For File1, you set Access tier to Hot.

Does this meet the goal?

- **A.** Yes
- **B.** No

Answer: A

Question No. 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy multiple instances of an Azure web app across several Azure regions.

You need to design an access solution for the app. The solution must meet the following replication requirements:

Support rate limiting.

Balance requests between all instances.

Ensure that users can access the app in the event of a regional outage.

Solution: You use Azure Front Door to provide access to the app.

Does this meet the goal?

- **A.** Yes
- **B.** No

Answer: A

Question No. 3

You have an Azure subscription that contains a Windows Virtual Desktop tenant.

You need to recommend a solution to meet the following requirements:

Start and stop Windows Virtual Desktop session hosts based on business hours.

Scale out Windows Virtual Desktop session hosts when required.

Minimize compute costs.

What should you include in the recommendation?

- **A.** Microsoft Intune
- **B.** a Windows Virtual Desktop automation task
- **C.** Azure Automation
- **D.** Azure Service Health

Answer: C

Question No. 4

You are designing a data protection strategy for Azure virtual machines. All the virtual machines use managed disks. You need to recommend a solution that meets the following requirements:

- * The use of encryption keys is audited.
- * All the data is encrypted at rest always.
- * You manage the encryption keys, not Microsoft

What should you include in the recommendation?

- **A.** Azure Disk Encryption
- **B.** Azure Storage Service Encryption
- **C.** BitLocker Drive Encryption (BitLocker)
- **D.** client-side encryption

Answer: A

Question No. 5

You are designing a microservices architecture that will use Azure Kubernetes Service (AKS) to host pods that run containers. Each pod deployment will host a separate API Each API will be implemented as a separate service-

You need to recommend a solution to make the APIs available to external users from Azure API Management. The solution must meet the following requirements:

- * Control access to the APIs by using mutual TLS authentication between API Management and the AKS-based APIs.
- * Provide access to the APIs by using a single IP address.

What should you recommend to provide access to the APIs?

- **A.** custom network security groups (NSGs)
- **B.** the LoadBalancer service in AKS

- C. the Ingress Controller in AKS

Answer: C
